Making YOUR HOMES MORE COMFORTABLE

Introducing the vision of NAOOLIN REALCON PVT. LTD. In most foreign countries the largest use of all urban water is in watering landscapes. When a landscape or irrigation system is poorly designed or poorly maintained, water demand increases as a result of excessive evaporation, leaks, and runoff.

Water consumption can be greatly reduced with careful planning, good plant selection, efficient irrigation systems, and good water management maintenance practices.

Similarly a location that's close to a natural water body as an added advantage because of the eco-balance. For Mid-sized and large Housing Projects there is a great need for water efficiency.

Sunshine Enclave has been conceptualized to help you create a landscape with living spaces that are not only water efficient, but attractive, colorful, and has low maintenance. The surroundings of this project are dotted with massive natural water bodies in areas like Koch Pukur and Thakdari, Hatishala, Bhojer Haat and beyond, thus delivering pure pollution-free air.

Live a blissful sun-kissed life here. Book your dream home today.
